

LEVEL 0 · ORIENTATION · 90 MINUTES

The wealthy never sell. They borrow.

How the buy-and-borrow strategy works — and whether it fits your situation.

Buy Borrow Thrive · The Confident Investor's Blueprint · Education only · No fund management · No hype

HOUSE RULES

Five things before we start

- 1 Mic off, camera on**
So we can see your beautiful faces.
- 2 Questions in the chat**
Answered at the end of each part.
- 3 Give it your 100%**
Learning needs positive energy.
- 4 Get a calculator**
We love Math because we make Money.
- 5 Type “ready” when you are**
Then here we go.

BEFORE WE BEGIN

This strategy uses borrowed money against a volatile asset.

If a programme will not tell you how it fails, do not give them money.

MODULE ONE

The land

A hectare in BGC, a bank, and the only thing that can take it away from you.

2021

You are offered a hectare in BGC, 30% below market

₱1,000,000

what you have in 2021

1 hectare

BGC, 30% below market value

Would you buy this land? Type “Yes” in the chatbox.

FIVE YEARS LATER • 2026

The same hectare

₱1,000,000

what you paid in 2021

₱2,000,000

what it is worth now

Let them celebrate. Do not move on too quickly.

THE QUESTION

**You want money out of that land.
You do not want to sell it.**

What are your options?

Raise your hand. Take two or three real answers. Thank each one. If nobody says “borrow against it”, filter to it.

What it actually takes

Appraised

The bank assesses the value — and you pay the appraisal fee.

What it actually takes

1

Appraised

The bank assesses the value — and you pay the appraisal fee.

2

Title

Due diligence. Is it really yours? Are your real estate taxes current?

What it actually takes

1

Appraised

The bank assesses the value — and you pay the appraisal fee.

2

Title

Due diligence. Is it really yours? Are your real estate taxes current?

3

Approved

And you might not be.

What it actually takes

1 Appraised

The bank assesses the value — and you pay the appraisal fee.

2 Title

Due diligence. Is it really yours? Are your real estate taxes current?

3 Approved

And you might not be.

4 80% loan-to-value

Calculators out. What is 80% of ₱2,000,000?

AND THEN THE DEDUCTIONS

Do you receive the full ₱1,600,000?

₱1.6M

approved

less

insurance

less

amortisation

less

credit loan protection

May mga bawas pa yan. Do you feel the hassle? Type “hassle” in the chatbox.

AND NOTICE THIS

You never sold the land.

You got liquidity out of an asset you kept. That is the whole idea, and it is centuries old.

THE SENTENCE EVERYTHING RESTS ON

**A drop is not a loss until you
are forced to sell.**

You would not lose the land because the market fell, or because you were wrong about BGC. You would lose it to foreclosure — forced to sell at a moment you did not choose. Everything we teach is about removing the force.

MODULE TWO

Digital real estate

The same shape, on a platform — and the one difference that matters.

SAME MECHANIC

Land and Bitcoin do the same job

Physical real estate

A hectare in BGC

- An asset that appreciates
- You can borrow against it
- You keep it while you borrow
- Forms, appraisal, due diligence, approval
- Fees and insurance come out of your loan

Digital real estate

Bitcoin

- An asset that appreciates
- You can borrow against it
- You keep it while you borrow
- No forms, no bank visit, no rejection
- You receive the whole amount you borrow

AND NOW THE HONEST PART

The difference that will cost you money

A bank forecloses

Physical real estate

- You miss payments
- Notices arrive
- Letters, then more letters
- Chances to fix it
- MONTHS

A platform just sells

Digital real estate

- The price hits a number
- No notice
- No letter
- Nobody calls you
- SECONDS

MODULE THREE

Capital preservation

What this asset actually does, and how anyone is still holding it.

SEVEN YEARS OF WEATHER

Roughly once a year, for seven years

Anyone who tells you this is unusual is lying or has not looked. It is the weather.

SO HOW IS ANYONE STILL HOLDING?

Not by predicting it. Nobody predicted it.

1

Borrow so little that the forced sale never reaches you

A ceiling on how much you borrow against what you own.

2

Keep money back that you never touch

A reserve that exists only to defend the position.

3

Write down what you will do before the price falls

Four alarms, each with an instruction attached. Decided while nothing is wrong.

AND NOW THE HONEST HALF

You still take the drawdown.

At the bottom of 2022 your Bitcoin was worth about 23 centavos on the peso. Our rules did not stop that and nothing can. What they did was make sure you still owned all of it — so when it turned, it turned in your hands. We preserve the asset. That is what lets you choose your own timing.

Straight from our prospectus

This is for you if

- You already earn or invest, and want a rules-based strategy instead of guessing
- You want to understand collateralised borrowing before you ever touch it
- You value capital preservation first, growth second
- You want mentors who show real charts, real levels, real risk math

This is NOT for you if

- You are looking for guaranteed returns or a get-rich-quick scheme
- You want someone to trade or manage money for you
- You would invest money you cannot afford to hold through volatility
- You skip risk management because “this time is different”

WHAT YOU CAN NOW DO

**You can explain this to
somebody else.**

Ninety minutes ago, borrowing against your assets was something rich people did that had nothing to do with you. You can now walk another person through the land, the loan, the foreclosure — and why forced selling is the only real loss.

WHAT YOU STILL CANNOT DO

You cannot name the price at which this gets taken away from you.

Not roughly — exactly, to the peso. There is a formula and it takes about a minute to learn. If you opened a position tomorrow you would not know the number. And the night that number matters, you will be reading it off a phone at 3am with everything red. That is not the night to learn arithmetic.

WHAT COMES NEXT

Level 1 — the BBT Masterclass

₱1,999

the complete framework

4 hours

live on Zoom

3×

you compute that number yourself

Asset selection, buying zones, prudent borrowing mechanics, and the risk rules that protect you.

AND WHO SHOULD NOT TAKE IT

Do not book Level 1 if

1

You do not yet have money you could hold for five years

Come back when you do. Nothing here expires.

2

Tonight made you excited rather than careful

Sit with it a week. Excitement is the thing that gets people liquidated. I would rather you arrive calm.

3

You are hoping for a signal to follow

Level 1 does not give you one. Keep your ₱1,999.

ONE STEP

Registration is in the chat.

Next cohort {{level_1_date}}. If you are unsure, message {{ops_lead}} and say you are unsure — that is a real answer and you will get a real one back. Thank you for tonight.
