

TRAIN THE TRAINER · 2 DAYS · MAX 12 CANDIDATES

The room is not the constraint.

Certifying a graduate to run Levels 0 to 3 to the standard.

Not one of the levels · By invitation · Entry: Level 3 Immersion complete, two cohorts observed, one live drawdown survived

THE BOTTLENECK

One instructor $\approx$ two cohorts a month

2

cohorts per month, per instructor

0

amount marketing moves that number

Every asset we have — the script, the analogies, the room mechanics, the callbacks — lives in one person's head and one person's calendar. The number of people who can run a room is the constraint.

What you may and may not change

Must NOT change

- The standing disclosure — verbatim, always
- The LTV ceilings — 30% position, 20% programme
- The reserve rule — 1:1
- The gates — no exceptions for people you like
- The nine claim corrections
- The pod ratio — one coach per eight
- The capital preservation table, and both halves of what it claims
- The five closing beats, including the disqualifier

MUST change

- The analogies. Mine are mine.
- “Sino dito naglaro na sa Timezone” works because it is my room and my reference.
- Find yours. A borrowed analogy delivered flat is worse than a plain explanation.
- MAY change: pacing inside a beat, the order of questions you take, your own worked examples — as long as they use round abstract numbers.

THE LINE YOU NEVER CROSS

You never make a return claim.

Not a number, not a range, not “historically”, not “conservatively”, not “people in my last cohort”. Not in the room, not in a DM, not in a testimonial you repost. We teach a mechanism and its failure modes; the participant does their own arithmetic. That is the whole compact, and it is the only reason we can teach leverage to beginners with a straight face.

Four moves — practise each on a partner

- 1 The typed check**

Closed question, one word, WAIT, acknowledge. The wait is the skill — most new facilitators ask and move on in two seconds, which trains the room that answering is optional.
- 2 The calculator moment**

Give them arithmetic they can do. A number you compute yourself is a number you believe. This is why Level 1 works and a lecture on the same content does not.
- 3 The filter**

Open question, take real answers, thank each one, then steer. You NEVER correct a participant in front of the room — acknowledge, then add.
- 4 The local analogy**

Land, refinancing, foreclosure, arcade tokens, Cashflow. Every abstract concept needs one, and it must come from your room's life.

The seven hard questions — answered cold

1

“How much will I make?”

“I will not give you a number, and anyone who does is selling you something.”

2

“Is this safe?”

“No. It is leveraged exposure to the most volatile major asset there is.” Then the drawdown table.

3

“My friend runs 78% and he is fine.”

“Then a 15% drop closes him out. Bitcoin does 15% in a bad week.” Do not editorialise beyond the arithmetic.

4

“My coach last cohort said 50% was fine.”

You WILL get this one. Do not defend the old material — show the table and say plainly that we corrected it.

The math from memory — 8 of 8 to pass

- 1 **Define LTV · new LTV after a $d\%$ drop · the additive shortcut and why we label it**
- 2 **Liquidation price formula · survivable drawdown at 78 / 50 / 30 / 20%**
- 3 **Position vs programme LTV, with a worked example**
- 4 **Top-up to restore a target LTV · alarm price conversion from a target LTV**

THE HARDEST THING A NEW FACILITATOR DOES

“We taught 50%. We ran the arithmetic. The rule is 30% now. Check my work.”

Some of your room will have heard 50% from a previous cohort or a friend. Do not defend it. Do not blame whoever taught it. Do not soften it into “some people prefer 30%”. A programme that corrects itself in public is more trustworthy than one that never has to — deliver it as strength, because it is.

Teach-back rubric — two beats drawn blind, both must pass

Criterion	Weight	Fail condition
Content accuracy	30%	Any wrong number, or any uncorrected claim from the corrections list
Room mechanics	20%	No typed check, no calculator moment, or corrected someone publicly
Timing	15%	More than 50% over the beat’s allotted time
Local analogy	15%	Borrowed the trainer’s analogy instead of bringing their own
Honesty	20%	ANY return claim — automatic fail for the whole certification

A candidate who fails one beat re-teaches it at the next workshop. A candidate who makes a return claim does not certify.

Three planted problems, unannounced

1

A participant arrives unverified and asks to “just watch”

Did they hold the pre-flight gate — warmly and firmly?

2

A participant about to send on the wrong network

Did the six-word checklist catch it before send?

3

A participant quietly sets 65% LTV because “the app said 78 was fine”

Did they catch it without shaming the person — and keep the other seven pods moving?

What it permits, and what it never permits

Certified to run

- Level 0 solo
- Level 1 solo
- Level 2 modules as lead, with coaches assigned
- Level 3 Immersion co-facilitated with a certified lead for the first two cohorts

Never

- Level 4 — mentorship is faculty only
- Certifying other facilitators
- Altering the ceilings, reserve rule, gates or disclosure
- Running an execution session below one coach per eight
- Making a return claim

What you carry after certification

- 1 Submit cohort variables for every cohort you run**
- 2 Verify the capital preservation figures before every cohort**

And correct the shared file when they have drifted.
- 3 Report every participant liquidation within 48 hours**

With the position card and the alarm history. No blame attaches to a facilitator for a liquidation — it attaches to not reporting one. We cannot improve the defense modules from cohorts we never hear about.
- 4 Re-certify annually · re-read the corrections before every cohort**

They change as the platform changes.
